SUMMARY

Results-driven Computer Science student with hands-on experience building scalable RESTful APIs using Node.js, Express.js, and PostgreSQL. Independently designed and developed a procure-to-pay backend system featuring JWT authentication, Role-Based Access Control (RBAC), and modular architecture during a professional internship. Familiar with AI/ML concepts including OCR, Computer Vision, TensorFlow, and Generative AI fundamentals through academic and project-based work. Additionally gained real-world IT infrastructure exposure as a NOC Analyst Trainee, working with networking, virtualization, storage systems, and incident management workflows. Strong foundation in Data Structures & Algorithms, OOP principles, and software design fundamentals, with a passion for building secure, maintainable, and high-performance applications.

EDUCATION

Bachelor of Technology in Computer Science and Information Technology May 2026
Reva University · Bangalore, Karnataka
Secured 6.9 C.G.P.A

SKILLS

Languages:	Java, JavaScript, Python
Current Tech Stack:	Node.js, Express.js, RESTful APIs, React.js, Streamlit
AI/ML & Emerging Tech:	TensorFlow, OpenCV, OCR, NLP Basics, Deep Learning Fundamentals, Generative AI Concepts
Cloud/Tools:	ServiceNow, VMware, Git, GitHub, VS Code
Databases:	PostgreSQL, MySQL, Redis, MongoDB
Software Design & Fundamentals:	Data Structures and Algorithms (DSA), Object Oriented Programming (OOPS), RDBMS, Software Development Life Cycle (SDLC), Agile Methodologies, Networking, SOP, RDP
Storage & Infrastructure:	SAN (Storage Area Network), NAS (Network Attached Storage), DAS (Direct Attached Storage), RAID (Redundant Array of Independent Disks), Backup & Recovery Basics
Soft Skills:	Communication, Teamwork, Adaptability, Problem-Solving

INTERNSHIP EXPERIENCE

NOC Analyst Trainee April 2026
Proval Technologies Pvt. Ltd.
Noida, Uttar Pradesh

- Gained hands-on exposure to Network Operations Center (NOC) workflows and monitoring practices.
- Learned and applied concepts of networking, servers, storage systems, and backup strategies.
- Worked with virtualization technologies and understood infrastructure management basics.
- Studied and followed Standard Operating Procedures (SOPs) for incident handling and escalation.
- Monitored system performance and understood alerting and troubleshooting processes.
- Developed foundational knowledge of IT infrastructure, uptime management, and issue resolution.

INTERNSHIP July 2025
VMA Labs Pvt Ltd
Bengaluru, Karnataka

vsync - procure to pay system (RBAC+Restful APIs)

- **Tech Stack - Node.js, Express.js, knex.js, PostgreSQL, REST API, JWT, Role-Based Access Control**
- Built a fully modular backend architecture with clearly separated services, repositories, and controllers managing Users, Products, Inventories, and Catalogs — ensuring clean code, high maintainability, and scalability.
- Designed and implemented a comprehensive RBAC system with fine-grained permission management across admin, manager, and standard user roles, securing all sensitive endpoints including role changes and inventory overrides.
- Developed full CRUD modules for Users, Products, Inventory, and Catalogs with field-level validation, secure password hashing, JWT-based authentication, session management, and role assignment workflows.
- Used knex.js with transaction support for all database interactions and indexed columns for efficient querying across all entities.
- Implemented middleware-based access control guards, centralized error handling, and request validation pipelines to enforce permission policies, standardize API responses, and validate all incoming payloads.
- Applied soft-delete across all modules to preserve historical data, designed paginated RESTful API contracts following best practices, and added comprehensive logging for auditing user actions, role changes, and inventory updates.

COLLEGE PROJECTS

3D Pen & Virtual Writing Pad | Python

Built a virtual writing pad that allows users to draw on the screen using hand movements captured through a webcam. The system tracks finger movement in real time and converts it into digital strokes, enabling touchless drawing and basic color selection. This project demonstrates practical use of computer vision concepts and real-time interaction.

ACHIEVEMENTS

- Member of HACC (REVA Coding Club); contributed to organizing national-level hackathons including Hackverse.
